

Download Construction Technology For Building Students

Construction and Building Technology introduces students to construction processes and procedures. Students will learn about construction technology, construction materials and management, and project design. They will study building foundations, subsystems, and structures, and learn how these systems are maintained, repaired, or altered. Construction and Building Technology introduces students to construction processes and procedures. Students will learn about construction technology, construction materials and management, and project design. They will study building foundations, subsystems, and structures, and learn how these systems are maintained, repaired, or altered. ...Building and Construction Technology provides students with an unrivaled university education, which prepares our graduates for rewarding careers in construction management, sustainable building systems, and building materials technology. We offer a B.S. major, a minor, as well as a thesis M.S., professional M.S., and a Ph.D. degree. Graduates of Ranken's Carpentry and Building Construction Technology program are qualified for employment with both unions and non-union building contractors specializing in new construction, home remodeling or in industry maintenance departments. Why choose Ranken to learn carpentry?
