We build apps of all shapes and sizes here at Savvy Apps, but a common element is that they communicate with servers. Very few apps today operate without some sort of Internet connectivity, meaning that they interact with a backend, web services, or APIs. Make travelling easier – on your way to, from or through the airport. Even if you only ever fly from Heathrow once in your life, the all-new Heathrow app is your ideal travel companion. The word "app" is an abbreviation for "application." It's a piece of software that can run through a web browser or offline on your computer, and on a smartphone phone, tablet or other electronic devices, including smart TVs and smartwatches. Apps may or may not have a connection to the internet. A mobile app or mobile application is a computer program or software application designed to run on a mobile device such as a phone/tablet or watch. Apps were originally intended for productivity assistance such as Email, calendar, and contact databases, but the public demand for apps caused rapid expansion into other areas such as mobile games, factory automation, GPS and location-based ...
