However, there are still many people who also don't like reading. This is a problem. But, when you can support others to start reading, it will be better. One of the books that can be recommended for new readers is EzBefore Using This Tool. This on-line tool includes spreader setting recommendations taken from the label of the product entered by the user. In all cases, the user should read and follow label instructions before applying any product. These settings are approximate and to be used as a guide only. Variations in particle size, walking speed, spreader model, age, and surface conditions, all affect spreader rate. Learn how your spreader flows, and adjust your settings to your conditions, and spreading technique. Your settings may be ½ to 1 setting higher or lower than these.
