

Download Manual Winding Movements

An automatic watch, also known as self-winding watch, is a mechanical watch in which the natural motion of the wearer provides energy to run the watch, making manual winding unnecessary. A mechanical watch which is neither self-winding nor electrically driven is called a manual watch. In 1888, when the Kurth brothers founded their company called Kurth Frères, only watch parts and movements were produced. These were sold in Switzerland and France. Fascinating mechanics From the past till now, Russian-made movements have proven their skills for many years in every imaginable environment. In horology, a movement, also known as a caliber, is the mechanism of a watch or timepiece, as opposed to the case, which encloses and protects the movement, and the face, which displays the time. The term originated with mechanical timepieces, whose clockwork movements are made of many moving parts. It is less frequently applied to modern electronic or quartz timepieces, where the word module ...
