As a member, you'll also get unlimited access to over 75,000 lessons in math, English, science, history, and more. Plus, get practice tests, quizzes, and personalized coaching to help you succeed. This lesson defines pharmacology and describes two areas of study within pharmacology that are concerned with how the body handles a drug and what a drug does to the body. To better understand this condition, there are two concepts vital to be mastered: conductivity and automaticity. Conductivity: is the property of the heart cells to transmit spontaneous impulses starting from the sinoatrial (SA) node, activating all parts of the heart muscle almost spontaneously. Conductivity is the basis of cardiac contraction and relaxation, allowing the heart to beat.². Contains Nonbinding Recommendations . Guidance for Industry. 1 .
